

Group Decision OS - Product Plan

1. Overview

A general-purpose decision-making system for groups to create structured decisions, compare options, vote, and reach clear outcomes. It replaces messy group chats and unstructured polls with a formal decision workflow.

2. Core Concept

- Decision: A question or problem (e.g., buy a car, choose restaurant)
- Options: Multiple choices with details like price, image, notes
- Voting: Simple, ranked, or weighted voting system
- Result Engine: Determines final outcome and stores decision history

3. MVP Features

- Create decision (title + description)
- Add multiple options per decision
- Voting system (yes/no or ranking)
- Result page showing winner and vote breakdown

4. Monetization

- Subscription model (\$5–10/month)
- Advanced voting modes (weighted, anonymous)
- AI recommendations and summaries
- Team/business plans for organizations

5. Expansion Strategy

- Start with niche use cases (car buying, roommates, travel groups)
- Focus on high-stakes decisions
- Expand into business workflows and team decision systems
- Add AI decision assistant features
